CE News

www.ce-sejem.si

Dear Business Partner,

Under the European Energy Efficiency Directive 2012/27/EU, we are facing a period of intensive improvements to meet the national energy efficiency targets by 2020 therefore the main theme of the trade show will be energy building renovation. A lot of attention will also be paid to the Slovenian Energy Concept which should be implemented at the beginning of 2016.

It has been found by some states in their national energy efficiency action plans that not only will the measures taken to achieve their energy efficiency targets mean saving energy, but they will also have other benefits. Some of the expected benefits are milder climate conditions, improved air quality, increased share in renewable energy sources, improved competitiveness and more reliable energy supply and distribution as well as wider development benefits such as better employability and economic growth, and finally, social benefits like reducing energy poverty.

National energy efficiency plans can create new business opportunities for you too! Present them to the public sector, economy and households at the central event featuring energy and industrial maintenance of the wider region – **2016 Energetics and Terotech-Maintenance**. In order to fit into the spring investment cycle, the 2016 trade shows will be organized in April.

We look forward to seeing you in Celje from 12th to 15th April 2016.

Yours sincerely,

Celje Fair Team
